Initial Camera Settings

- Insert a fully charged battery
- Insert and format a high capacity SD memory card.
- Set Date and Time.
- Set Shooting Mode to "P" Program AE.
- Set ISO to "100."
- Set White Balance to "Auto."
- Set Flash Mode to ON " $\frac{1}{2}$."
- Set Face Detection to "Off."
- Set AF Mode to "Center."
- Set LED Illuminator to "Off."
  A strobe focusing light is recommended to assist AF underwater.

Note: Enable Macro 🌷 mode when shooting close-up subjects. If overexposure occurs, back away from the subject and zoom in.

External Accessory Lenses

An external wide angle conversion lens increases angle of coverage so you can get much closer to your subject while still fitting everything in the frame. By reducing the amount of water between the subject and your camera lens, the resulting image will be more crisp and colorful.

Moderate vignetting (shading in the corners) may be present in the widest angle setting when using external accessory lenses. This effect can be eliminated by zooming in slightly.

Attach 67mm threaded #6420 Ikelite W-20, Inon Type II, and Epoque lenses using the #9306.78 port adaper. This adapter may also be used to attach 67mm threaded macro lenses.

Attach bayonet style Inon macro or UWL-100 28AD, UWL-105AD and UFL-165AD wide angle lenses using the #9306.85 port adapter.
