Preparation

This product has been water pressure tested at the factory and is depth rated to 200 ft (60m). Thoroughly inspect and immerse the empty housing completely in water before installing a camera. If any fogging occurs or droplets of water enter the housing, do not install a camera. Clean the main housing o-ring and retest to make sure that it is watertight. Refer to the Troubleshooting section, page 24.

Please read your camera manual thoroughly to have a full understanding of each camera function.

If you are new to underwater photography, be sure to read the Photo Tips section, page 23.

Specifications (no camera installed)

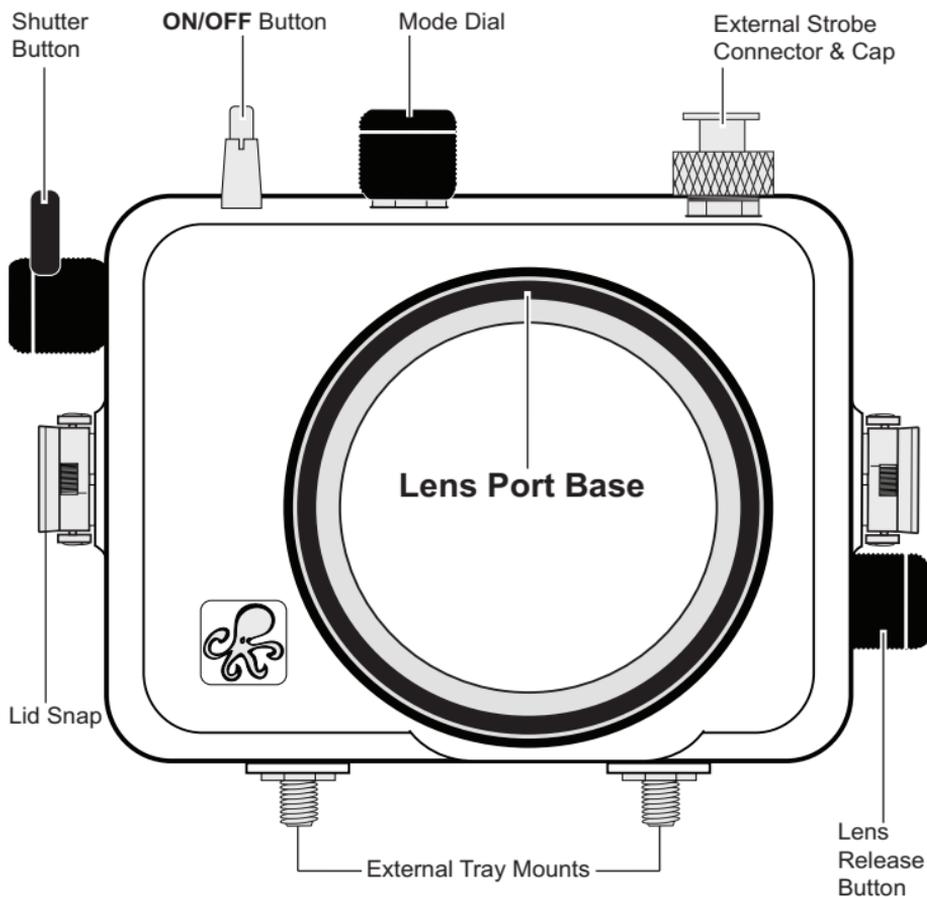

ControlsAll important camera functions are accessible
BuoyancySlightly negative in freshwater
Depth Rating200 ft (60m)
Strobe ConnectionIkelite Digital TTL ICS-5 5-pin ElectricalBulkhead plus TTL circuitry compatible withcurrent model Ikelite DS-series strobes
Use Built-in FlashNo
Tray and Handle Weight11.5 oz (327 g)
Main O-Ring0110
Housing Dimensions6.4 x 7.5 x 5.9 in (163 x 190 x 150 mm)
Housing Weight3.19 lb (1447 g) not including tray, handles orport
Housing MaterialPolycarbonate front, acrylic back

What's in the Box

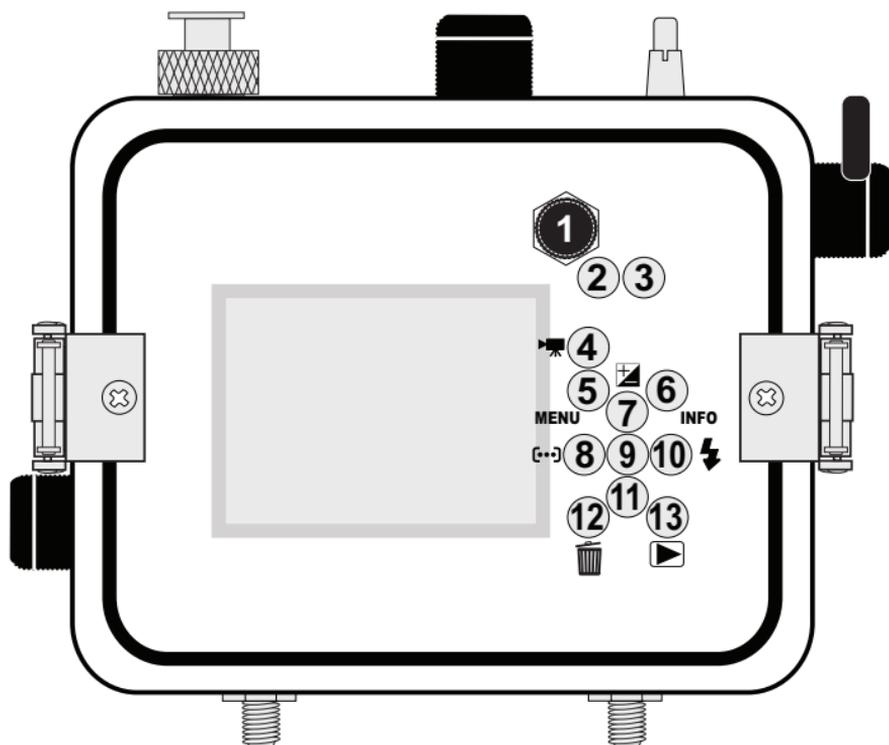

- Housing
- Instruction Manual
- Tray with Quick Release Handle
- Waterproof Bulkhead Cap (*connected to external strobe connector*)
- Silicone 1cc Lubricant Tube
- Cleaning Cloth
- 1/8-inch Allen Wrench

Parts of the Housing - Front View

Housing controls are provided for all accessible camera functions.

Parts of the Housing - Back View

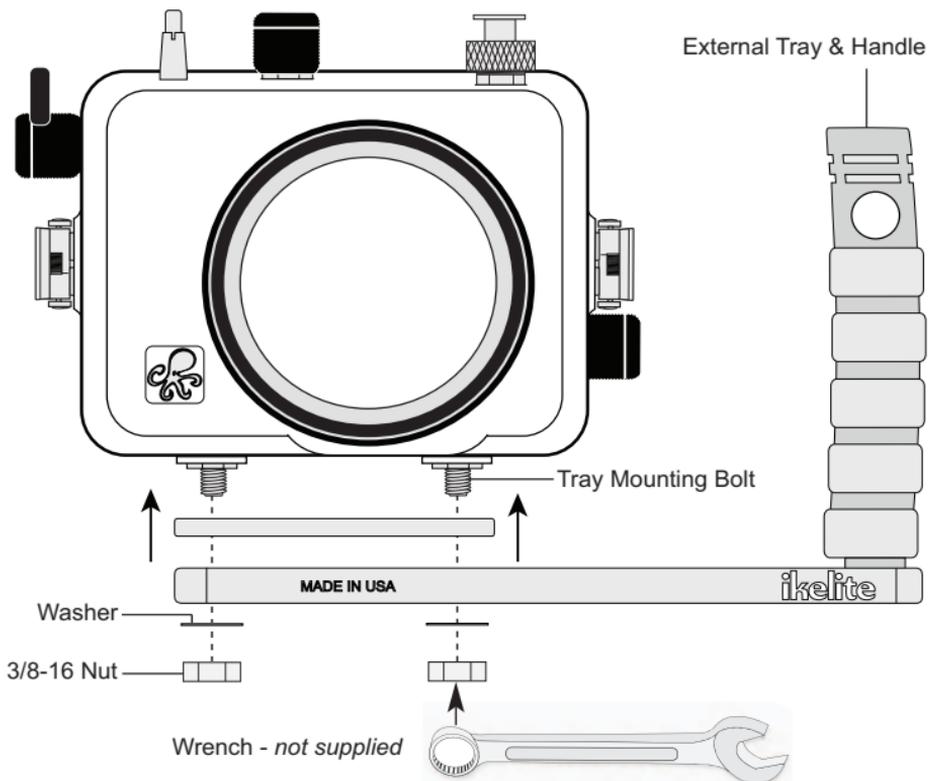

1. Control Dial
 2. **Fn** Button
 3. 🔍 Button
 4. 🎬 Movie Button
 5. **MENU** Button
 6. **INFO** Button
 7. ▲ 📷 Up / Exp. Comp. Button
 8. ◀ [••] Left / AF Target Button
 9. **OK** Button
 10. ▶ ⚡ Right / Flash Button
 11. ▼ Down / Self-timer Button
 12. 🗑 Erase Button
 13. ▶ Playback Button
- 6

Housing and Camera Setup

STEP 1 - Remove/Attach Tray and Handle

The Tray and Handle may be removed for transport and then re-attached for housing use. We recommend leaving the Tray and Handle attached whenever possible to avoid accidentally scratching table tops or other surfaces with the Tray Mounting Bolts.

To remove, loosen both 3/8-16 Nuts using a 9/16" open/box end or socket Wrench (*not supplied*).

STEP 2 - Initial Camera Settings

Setup your camera for underwater use and then adjust your settings once underwater.

- Insert a fully charged camera battery and a SD card.
- Set Mode Dial to “Av” Aperture Priority. Set aperture to F5.6, or F18 for macro photography (close-ups). If faster shutter speeds are desired or a DS-series strobe is not being used, then set Mode Dial to “M” Manual Mode and shutter speed to 1/60th second or 1/125th second for fast moving subjects. Other shooting modes are not recommended.

- In 1 Menu:

 **Caution:** Save recorded images on the SD card to a computer or other device before formatting card. In Card Setup, set Format to “Yes.” In Record Mode set Still Picture to LF or other desired setting. Set Movie to “MOV to FullHD”  F.”

- In  2 MENU set Image Stabilizer (Still Picture) to “S-IS-AUTO.”

- In A. Custom MENU: Set AF Mode Still Pictures to “S-AF.”

Set Full-time AF to “Off.” Set Reset Lens to “Off.”

Set Home A. AF/MF to the center. Set AF Illuminat. to “Off.”

Set Face Priority to “Off” and Area Pointer to “on.”

- In F.  Custom Menu: set X-Sync. to 1/250 and Slow Limit to 1/60.

- In J. Custom Menu: Set Touch Screen Settings to “Off.”

- In  MENU: Set Rec View to “4sec.”

- In OK Menu:

Set White Balance to “Auto.” For best results, set to Manual  1 White Balance and reset for each working depth or when using a color filter.

Set Aspect Ratio to “4:3” or other desired setting.

Set Flash to “Fill In” .

Set Metering to “Ctr-weighted”  and ISO to “200.”

Set Face and Eye Priority to “Off.”

* All camera functions not mentioned should be set to the user preference.

STEP 3 - Opening the Housing

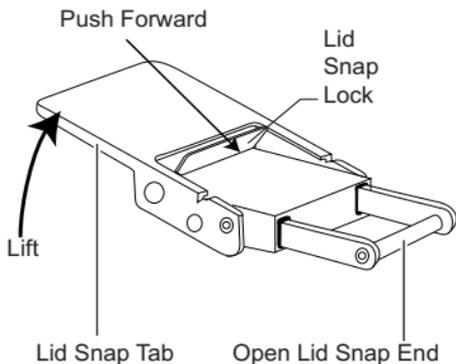

Lid Snaps have a **Lock**.

1. Push Lid Snap Locks forward and lift as shown. Open opposing Lid Snaps simultaneously. Keep pressure on the Lid Snaps so they do not fly open quickly.

Some Lid Snaps have a lot of spring tension once they go over center, so keep a firm grip on each Lid Snap. Lid Snaps may also be opened one at a time.

2. Remove the Housing Back.

Note: If the back is hard to remove, place the Open Lid Snap End under the lid hook and against the housing. Lift up on the Lid Snap Tab to break the housing seal.

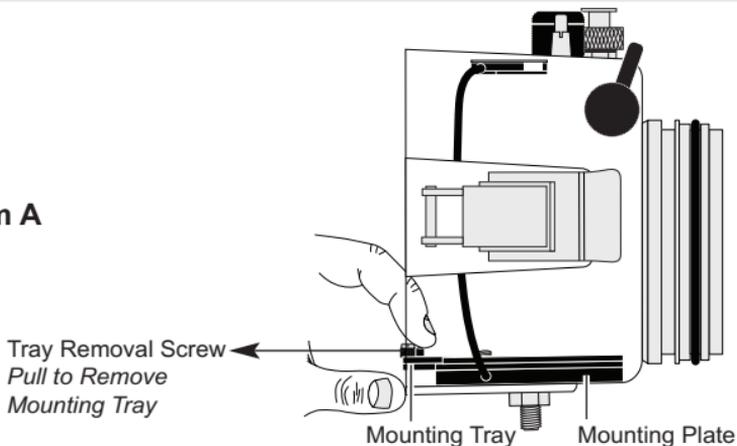

STEP 4 - Installing Camera in the Housing

1. Make sure the camera battery is fully charged and a SD card is inserted into the camera.
2. Rotate Housing Lens Release Button control up and forward against front of housing.
3. The Mounting Plate is secured to the inside bottom of the housing. The camera Mounting Tray slides into the Mounting Plate. Use the index finger of your hand to pull the Tray Removal Screw on the back of the Mounting Tray away from the Mounting Plate, **Diagram A, page 10**. Use your thumb to apply opposite pressure against the bottom of the housing to assist in removal of the Mounting Tray.

STEP 4 - Installing Camera in the Housing - continued

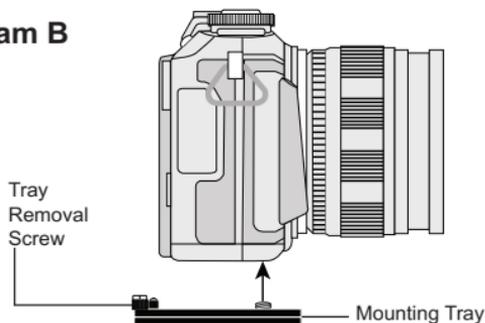

Diagram A

4. Using a coin or flathead screwdriver (preferred), secure the camera Mounting Tray to the camera tripod mount, **Diagram B**. Tighten camera **firmly** to avoid movement on tray. The Mounting Tray attaches one way with the Tray

Removal Screw to the back of the camera. An additional 1/4-20-inch Tray hole allows attachment to a land tripod stand.

Diagram B

5. Gently slide the camera with Mounting Tray back into the Mounting Plate with the camera attached **Diagram C, page 11**. Make sure the hotshoe wire is out of the way. Using your thumb, push against the Mounting Tray until it stops sliding forward into the Mounting Plate. Give the Tray an extra push to make sure it is properly seated all the way forward in the Mounting Plate, **Diagram D, page 11**.

STEP 4 - Installing Camera in the Housing - continued

Diagram C

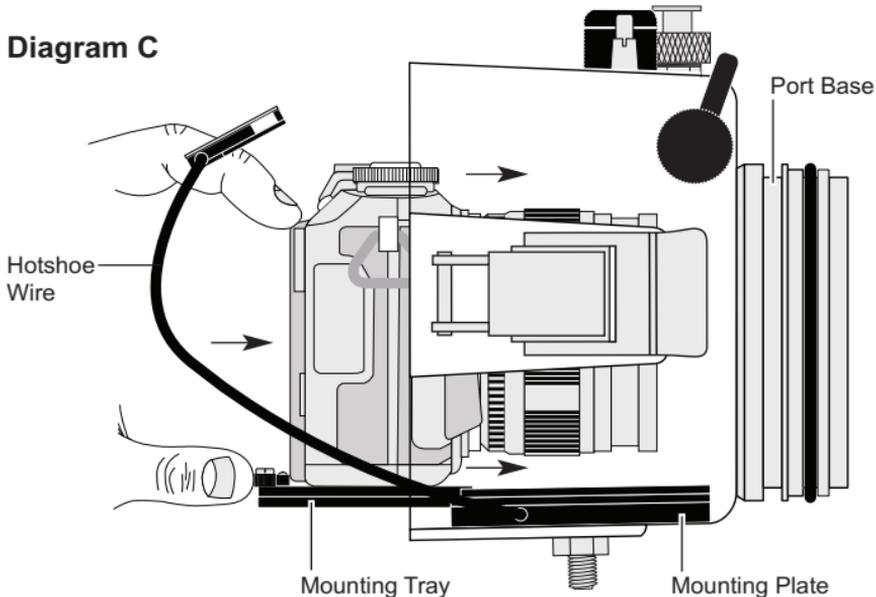

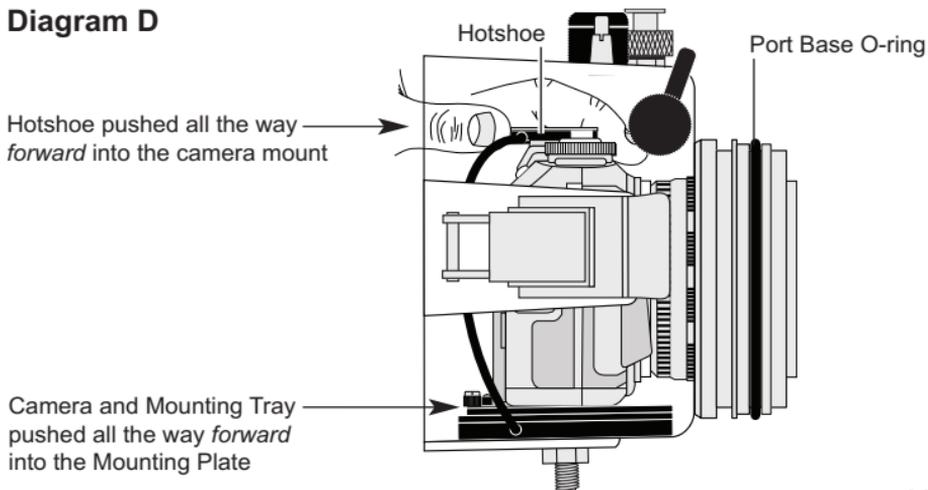

Diagram D

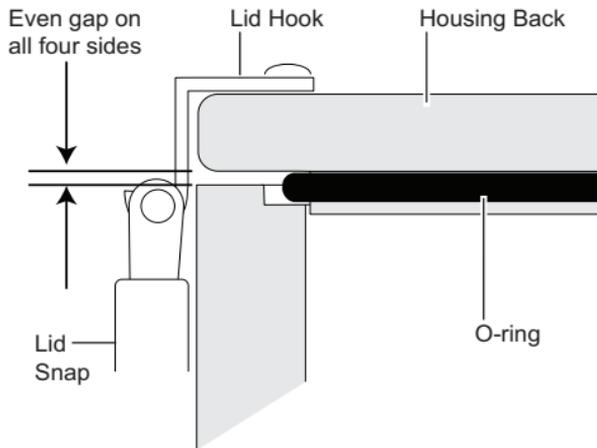

STEP 5 - Attach the Hotshoe

Slide Hotshoe into the top camera mount until it stops, **Diagram D, page 11**. Hotshoe must be all the way forward in the camera mount to assure a good electrical connection with a strobe.

Make sure Hotshoe cord does not interfere with controls or the housing back when closing the housing.

STEP 6 - Closing the Housing

1. Place housing face down in your lap or on a flat surface. Check to see that there is an o-ring on the housing back, and that it is clean and in its proper location.
2. Guide the back onto the housing front. Make sure the hotshoe wire is out of the way. Once the back is properly installed, the o-ring should touch the housing all the way around. There should be an even gap on each side of the housing between the housing and the back.

3. Lift the lid snaps so they are extended and place each lid snap into the corresponding hook on the housing back.
4. To close the housing, push down on the

opposing lid snaps simultaneously until they snap into place. Be sure they are down far enough to engage the **lock - Page 9**. The o-ring seal should now appear as a solid black line from the back of the housing.

STEP 7 - Attach Optional M.I.L (MIL) Port

M.I.L. (MIL) = *Mirrorless Interchangeable Lens*

- ⚠ CAUTION:** This housing **does not** come with a lens port. An optional MIL Port must be properly attached to the housing **before** submersion in water; see www.ikelite.com for compatible lens/port combinations. After purchasing an optional port for your lens, reference your port instruction manual for proper installation procedure.
- Once the Port is properly installed you can test the housing for watertightness without a camera inside to ensure all housing seals are working properly.
- DO NOT leave the Optional MIL Port off the Port Base for extended periods of time. This can result in debris being attracted to the Port Base O-ring, **Diagram D, page 11**, resulting in a bad seal.

STEP 8 - Final Check

The clear housing permits instant visual inspection of the camera and sealing surfaces as well as complete monitoring of controls and camera LCD screens. This housing has been factory water pressure tested to 200 ft (60 m).

Once the housing is closed, recheck the o-ring seal. Double check the gap between the housing back and the housing. It should be even all the way around the housing.

Look through the clear plastic back at the o-ring. You should see a darkened area or solid black line where the o-ring is compressed against the housing back. If you do not see an even black compression seal all the way around the back, open the lid snaps, reseal the housing back and close the lid snaps. Visually check the seal again.

Usage

Turn the camera on and operate each of the housing controls to get a feel for using the camera in the housing.

Entering the Water

As soon as you enter the water, take a moment and check to see that the housing is properly sealed. We recommend you first water test the housing with no camera inside to assure a safe and watertight environment.

Next, check to see if there are any bubbles on the face of the lens port. If there are, take your finger and remove them. If there are bubbles on the lens port they can produce soft focus spots in your photos or video.

Removing the Camera from the Housing

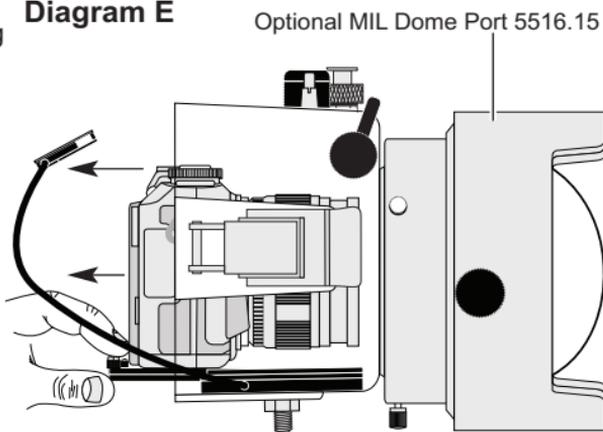

1. Thoroughly dry housing.
2. Remove the housing back, **see Opening the Housing, Step 3, Page 9.**
3. Remove the Hotshoe from the camera mount.
4. Place your index finger over the top of the Tray Removal Screw and gently pull backward to separate Mounting Tray and camera from housing. Continue pulling Mounting Tray backward while holding the camera with your other hand; remove from housing.

If you are finished using the housing, remove the Mounting Tray from the camera bottom and slide it back into the Housing Mounting Plate.

For storage and travel, remove the back o-ring and place in a small plastic bag. Place the bag inside the housing and re-attach the housing back.

Note: The Mounting Tray might need to be removed when changing a camera battery or memory card.

Diagram E

Strobe Use and Compatibility

Strobe Compatibility

- AF35.....no
- DS50.....yes, above serial number 70,000
- DS51.....yes
- DS125.....yes, above serial number 5000
- DS160, DS161yes
- DS200.....yes, above serial number 7163
- Non-Ikeliteyes, manual flash exposure only

Ikelite Housing Conversion Circuitry (MIL Housing)

This small compact housing has Ikelite designed and patented Conversion Circuitry built right in. The Conversion Circuitry provides real TTL flash exposure when used with Ikelite DS series strobes. The Circuitry is automatically activated once a DS series strobe is attached to the housing and turned on. Once attached, turn the strobe on first before turning on the camera.

Non-Ikelite strobes can be used in manual settings only. The circuitry will be inactive and provide only manual flash.

Attaching a Sync Cord to the Housing - Diagram F, Page 16

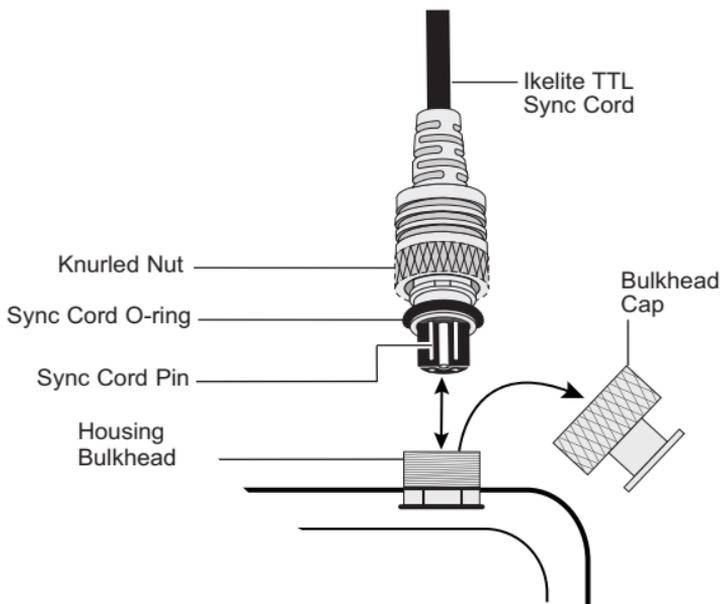

The Housing Bulkhead is designed to accept sync cords with Ikelite 5 pin connector fittings.

1. Lightly lubricate the Sync Cord O-ring. Use ONLY Ikelite lubricant (supplied with housing).
2. Remove Bulkhead Cap from Housing Bulkhead.

Attaching a Sync Cord to the Housing - continued

- Line up the Sync Cord Pins with the corresponding Bulkhead Receptacles. Gently insert Sync Cord into Bulkhead. *DO NOT* force this installation. *If the Sync Cord does not seat properly inside the Bulkhead, then the Pins and Receptacles are improperly aligned (repeat Step 3).*
 - Tighten the Knurled Nut snugly using your Index finger and thumb. *DO NOT* use pliers or other tools to tighten the Knurled Nut.
- *Always remove the Sync Cord from your Housing when not in use and replace the Bulkhead Cap.*

Diagram F

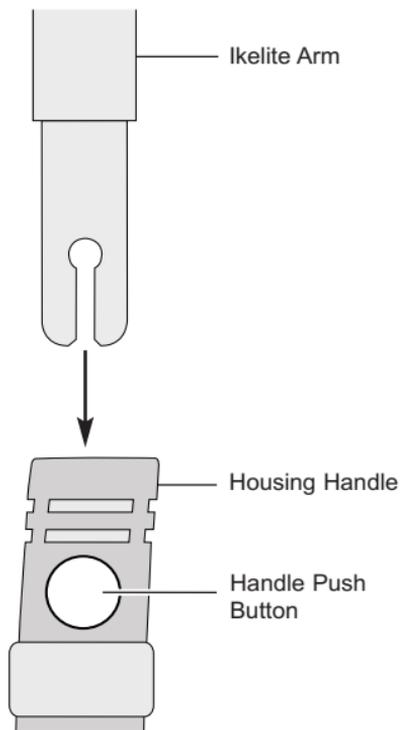

Attaching an Ikelite Strobe Arm to the Housing Handle

To attach an Ikelite Arm to your Housing Handle, depress the spring-loaded Handle Push Button until it stops. Gently slide the pronged end of the Ikelite Arm into the hole in the top of the Handle as shown, **Diagram G**.

When the Ikelite Arm is properly seated, the Handle Push Button will return to its starting position.

Diagram G

Spare Parts (available through Ikelite or any Ikelite Dealer)

- 0184.2 Silicone Lubricant 2cc reclosable tube
- 9104.5 Waterproof bulkhead cap
- 0110 Main o-ring
- 0132.36 Port base o-ring

Recommended Accessories

Optional M.I.L. (MIL) (Mirrorless Interchangeable Lens) Ports

Visit www.ikelite.com to select the correct MIL Ports for your lenses.

Tray + Dual Handles

Add stability and additional gripping points for comfortable use of the housing. Attach a second video light to eliminate shadows and evenly light your subjects.

DS161 Strobe Kit

The DS161 combines power with wide angle coverage to give you an excellent lighting source for both still photos and video. Instead of a simple focus light, the DS161 includes a super even, 500 lumen video light. The light is suitable for close-up, macro, portrait, and wide angle fill-in work or as a focus assist light. Automatic shut-off when the flash fires ensures that the video light will have no undesired effects on still photos.

A full range of accessories are available to support your housing. Please visit www.ikelite.com to see the most current information about recommended accessories for your housing.

Maintenance

Lens Port

After use, rinse and gently dry the outside lens port with a non-abrasive cloth to avoid water spotting. Do not rinse inside the Port. To clean, use a mild soap solution or lens cleaner. It is NOT necessary to remove the Port for cleaning.

 **Do not use Rain-X, alcohol, window cleaner, or any other cleaning solution on the Lens Port.**

Lubricant

Ikelite provides silicone lubricant with the housing. We recommend you use **only** Ikelite lubricant on Ikelite products. Other brands may cause o-rings to swell and not seal properly.

Use only enough lubricant to lightly cover the Port Base O-ring, or lubricate a sticky control. Wipe off any excess lubricant with a clean cloth. Lubricant is not a sealant; it is used to reduce friction. Excessive lubricant can collect sand, hair and dirt which may interfere with proper sealing.

 **CAUTION: Never use spray lubricants as the propellant ingredient can cause the plastic housing to crack or o-rings to swell. Use Ikelite lubricant only.**

Housing Maintenance

Your Ikelite Digital Housing should be given the same care and attention as your other photographic and video equipment. In addition to normal maintenance, we recommend that the housing be returned to Ikelite periodically to be checked and pressure tested.

- **Do Not** leave the camera and housing in direct sunlight for prolonged periods. Heat may damage the camera.
- **Do Not** ship the camera in the housing.
- Before using the housing, always check the tightness of the **set screw** in each control knob. Check each **control gland** penetrating the housing to make sure they are tight. There is a slight chance that either could vibrate loose during travel.
- Keep the Port Base O-ring clean and lightly lubricated. To lubricate, place a small amount of Ikelite lubricant on your fingers and rub the lubricant over the exposed o-ring surface. If removing the o-ring to lubricate, do not use metal objects that may scratch the o-ring sealing surface. Only apply enough lubricant to make the o-ring feel slick. **Do not stretch the o-ring**. This light coating of lubricant will allow MIL Ports to slide more easily over the Port Base.
- Keep the area where the housing o-ring fits and the sealing surface of the housing clean.
- Rinse the housing exterior thoroughly in freshwater after each saltwater use. Depress push buttons repeatedly in freshwater to eliminate trapped saltwater. Dry with a soft cloth. Dry lens port to eliminate water spotting. After several uses in saltwater, soak the housing exterior in a mild soap solution; rinse and dry before storing. When storing the housing, remove the back o-ring and place in a plastic bag. Place the plastic bag inside the housing for safe keeping.
- If removing a housing push button, **Do Not** re-use the E-clip. Contact Ikelite for replacement E-clips (part 0319.12).
- Leave lid snaps in the open position when not using the housing for extended periods.

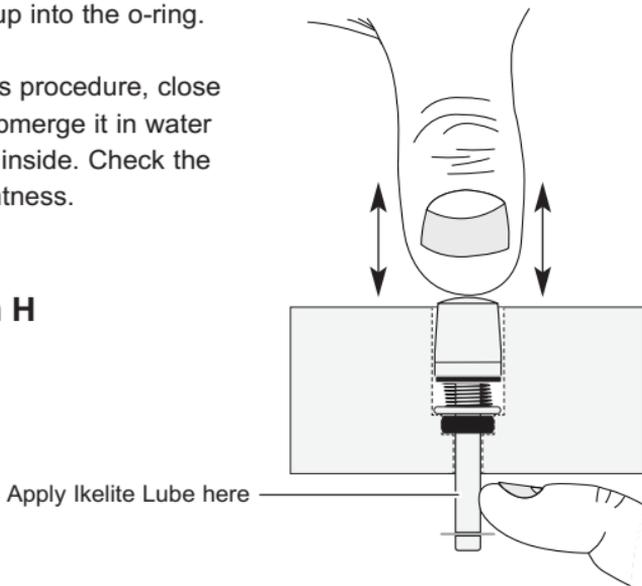

Control Maintenance

Ikelite controls are designed to provide years of reliable service with minimal maintenance.

- Push button controls normally require no maintenance other than rinsing in freshwater after saltwater use. Depress each push button in freshwater several times to eliminate trapped saltwater. If a push button control becomes difficult to push or if it sticks when depressed, soak the housing in luke warm freshwater. After a few minutes, operate the push button. If this does not correct the problem, return the housing to Ikelite for maintenance. If you are on a trip and unable to return the housing immediately, a push button may be lubricated by pressing and holding the push button all the way in. Then, use your finger or other small non-metal object to place a small amount of lube at the base of the shaft inside the housing. Press and release the push button several times until the lube is worked up into the o-ring.

After completing this procedure, close the housing and submerge it in water without the camera inside. Check the control for watertightness.

Diagram H

Control Maintenance - continued

In the unlikely event one of the larger gland style control shafts sticks or becomes difficult to operate, you can remove the control from the housing and lubricate it, or return the housing to Ikelite for maintenance. To remove the control, **Diagram I**, loosen the set screw in the knob (allen wrench required); remove the knob. If there is salt or dirt build-up on the exposed control shaft, clean the shaft. Open the housing and gently slide the control shaft out of the control gland. Clean and lightly lubricate the shaft, including the end of the shaft.

Slide the shaft back into the control gland and gently slide it back and forth a few times without fully removing the shaft from the gland.

Replace the knob, noting the flat area on the shaft. The set screw in the knob should tighten down against the flat area on the control shaft so the knob does not turn on the shaft.

After completing this procedure, close the housing and submerge it in water without the camera inside. Check the control for watertightness.

Diagram I

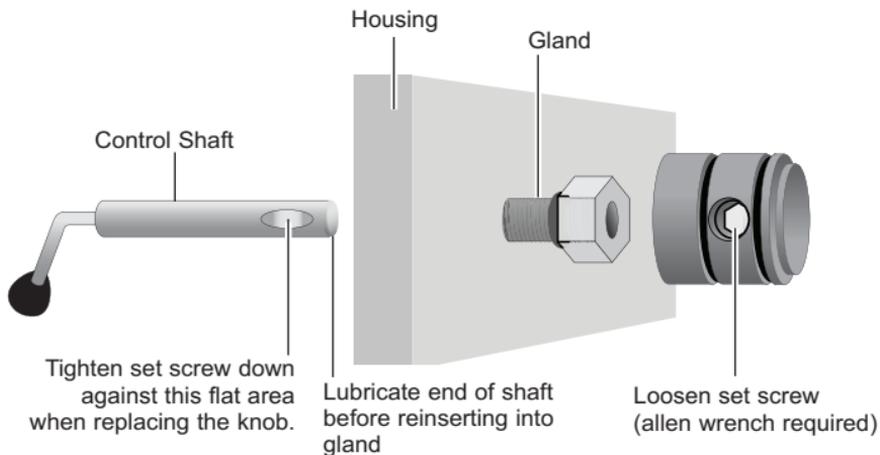

Photo Tips

- The number one rule in underwater photography is to eliminate as much water between the camera and subject as possible. Get as close as you can to the subject, then use the zoom. If you are using flash for still photos, subjects beyond 6 feet (1.8m) will not have much color regardless of strobe power.
- Photograph in clear water; do not stir up the sand or silty bottom. If backscatter becomes a problem in the environment you are photographing, an external flash will help eliminate much of the backscatter.
- Many digital cameras have a slight lag time between when you press the shutter release button and the camera actually takes the picture. Hold the housing steady a second or two after pressing the shutter release button.
- Do not shoot down on subjects as they will quite often blend into the background and be difficult to see in the photograph. Shoot subjects straight on or shoot up at a slight angle using the blue water as a contrasting background.
- When using daylight or flash, if your camera consistently over or underexposes the image, you may want to adjust your camera's exposure compensation  or flash exp. comp.   settings.
- If you error in exposure, it is better to have the image slightly underexposed rather than overexposed. An overexposed image is missing color information which cannot be adjusted in a photo processing program. A slightly underexposed image has color information that can be adjusted.
- It is important to respect all living creatures underwater, including people, marine life, and coral. While we encourage people to get close to their subjects when taking a photograph, they should not touch, lie on, or in any way disturb the things they find underwater.

Troubleshooting

Problem	Solution
Push buttons or controls are sticky or hard to operate	<ul style="list-style-type: none">- Remove the camera and rinse the closed housing in freshwater. Vigorously press each push button in and out several times to release any trapped saltwater or debris.- Press a sticky push button all the way in and place a small amount of lube on the small end of the push button shaft at its base. Release and operate the push button several times to distribute the lube, Diagram H, Page 21.- If a larger gland style control is sticky, grab the control knob, pull it out, and then push back in. If still sticky, see the Control Maintenance section, Diagram I, Page 22.- Camera eyecup must be removed.- Return housing to Ikelite for routine maintenance.
Image is over/underexposed, or a corner of the image is dark	<ul style="list-style-type: none">- Add one or two DS-series strobes to the system.- Check that the strobe is firing when taking a picture. Camera flash should be forced on and set to "Fill In."- When using an external strobe, make sure it is turned on, set properly, and its battery is charged.- Check all corded connection points.- Change camera shutter speed or aperture.- Move closer to or further away from the subject.- Adjust Flash Exposure Compensation  .

Problem	Solution
Camera does not take a picture or picture is blurry.	<ul style="list-style-type: none"> - Install a fully charged battery. - There is not enough available light for the camera to properly focus. Add a focusing light or strobe with a built-in focusing or video light to your system. - Select a center focus point in your camera menu. - Select a faster shutter speed.
Housing is hard to close	<ul style="list-style-type: none"> - Make sure the camera is mounted properly in the housing and controls are out of the way. - Main housing o-ring is not seated properly. - Hotshoe cord is in the way.
Fogging occurs on the Lens Port	<ul style="list-style-type: none"> - Humid air is trapped inside the housing. The camera produces heat and may condense any trapped moisture forming fog on the lens port. Close the housing in an air-conditioned room or vehicle, or in front of an air-conditioner. - The housing should not be in direct sunlight for an extended period of time. - Purchase desiccant packs also known as moisture munchers from a local camera store. Place one or two new packs in your housing before each day of diving. - If moisture or water droplets are present around the controls or sealing areas, return the housing to Ikelite for evaluation. - Clean the main housing o-ring and sealing surface of the housing.

Problem	Solution
Water enters the housing	<ul style="list-style-type: none"> - Remove, clean and properly lubricate the main o-ring. - Look for hair, dirt, or foreign debris crossing the o-ring seal. - Reassemble the housing without a camera installed and pressure test or take diving. - Return housing to Ikelite for evaluation.
Pictures are too blue or too green	<ul style="list-style-type: none"> - Add an optional color correcting filter to the camera lens. - Use custom (manual) white balance. Reset for each working depth or when attaching a color correcting filter to the camera lens. - Add an external strobe. - Move in closer to your subject when taking a picture.

Customer Support

Please read the troubleshooting section of this instruction manual before contacting Ikelite Customer Support.

Limited Warranty

This Ikelite product is warranted against any manufacturing defects for a period of one (1) year from the original date of purchase. Defective products should be returned to Ikelite postage paid. Ikelite will, at its sole discretion, repair or replace such products, and will return to customer postage paid. All other claims of any nature are not covered. Except as mentioned above, no other warranty expressed or implied applies to this Ikelite product.

Returning Products For Service

Ikelite is most interested in performing any service to ensure that all products perform as intended. Evidence of purchase date must be provided to obtain warranty service. No prior authorization is required. You may return directly to Ikelite or through an Ikelite dealer. Please include a brief description of the problem, any relevant email correspondence, and/or instructions on what services are required. Always include name, shipping address, email address, and phone number inside of the package. Send postage paid to:

Ikelite Underwater Systems
Attention: Service Department
50 West 33 Street
Indianapolis, IN 46208 USA

- *No reimbursements for postage paid will be issued.*
- *You may also want to insure the package.*

Returning Products for Service - outside the United States

For the separate international customs documentation form that you complete to accompany the shipment, please state or designate that the enclosed products were originally manufactured in the USA and are being returned to the manufacturer for repair service. Value of the equipment listed for customs purposes should be zero.

Product Registration

Please go to www.ikelite.com to register your Ikelite housing within 15 days of purchase.
